INTRODUCTION

Sustainability is currently at the heart of the Real Estate industry. Consumers and businesses alike are increasingly demanding energy efficient buildings to reduce their impact on the environment. 'Green Real Estate' (GreenRE) was developed in close collaboration with stakeholders from the public & private sector including professional service providers in response to the growing need for developing a more sustainable built environment.

"GreenRE was officially launched on the 22nd of March 2013 by the then Minister of Energy, Green Technology and Water (KeTTHA), YB Tan Sri Peter Chin."

OBJECTIVES

- To drive the real estate industry towards sustainable development by encouraging the adoption of green initiatives
- Establish a standard of measurement for green buildings
- Promote an integrated, whole-building design for better built environment quality
- Promote efficient use of resources such as energy, water and other building materials towards economic viability
- Reduce the potential environmental impact of a development

OUR SERVICES

GREEN CERTIFICATION

GreenRE's assessment tools are performance-based standards that provide a framework to meet green certification requirements in a tropical setting. By adopting the GreenRE criteria, property developers and building owners can develop high performance green buildings and townships which are energy, water and resource efficient. These green buildings and townships will have a lower operating cost, thus, reducing the living expenses of the building users. In addition, these buildings will have a lower overall carbon impact.

The GreenRE certification is fully recognised by MESTECC (formerly KeTTHA), MGTC, MIDA, IRDA and local authorities and GreenRE Certified building owners are eligible for tax incentives and investment tax allowances (ITA) under MIDA.

GreenRE being a Malaysian-developed rating tool enhances the country's competitiveness and standing in the international arena.

TRAINING

GreenRE conducts courses that help to increase awareness of the importance and benefits of high performance green building. Our courses also aim to share our knowledge and information about the best practices in the industry.

- GreenRE Managers Course
- Technical Seminars
- Short Courses

ASSESSMENT TOOLKITS

RES

Residential Building

NRB

Existing Industrial Facilities

GreenRE assessment criteria consists of 6 environmental impact categories namely:

RES, NRB, ENRB, HC, IND & EIND

PART 1 Energy Efficiency : Building design & system selection to optimise the energy efficiency of buildings.

PART 2 Water Efficiency: Selection of fittings & strategies enabling water use efficiency during construction & building operation.

PART 3A Environmental Protection: Design, practices & selection of materials & resources that would reduce the environmental impacts of built structures.

PART 3B Sustainable Operation & Management: Sustainability of operation & management that would reduce the environmental impacts upon building operation.

PART 4 Indoor Environmental Quality: Enhance the environment (incl. air quality, thermal comfort, acoustic control & daylighting).

PART 5 Other Green Features: Adoption of green practices & new technologies that are innovative & have potential environmental benefits.

PART 6 Carbon Footprint of Development: This category focuses on the use of carbon calculator to calculate the carbon emission of the development.

TOWNSHIPS

PART 1 Energy Efficiency: Approach that can be used in the infrastructure & public amenities to optimise the energy efficiency of the township.

PART 2 Water Management: Selection of fittings for public amenities & strategies towards efficient water usage & management.

PART 3 Material & Waste Management: Design, practices & selection of materials & resources that would reduce the environmental impacts & the waste management strategies.

PART 4 Environmental Planning: Design strategies that would enhance the indoor environmental quality (incl. air quality, thermal comfort, acoustic control & daylighting).

PART 5 Green Buildings & Green Transport: Public transportation network & availability of green rated buildings within the township.

PART 6 Community & Innovation: Community involvement & innovative features available for the benefit of the community.

INFRASTRUCTURE

PART 1 Landscape, Ecology & Land Efficiency: Minimise impact to existing biodiversity of site area & provision of public amenities that are easily accessible.

PART 2 Energy: Design of infrastructure & public amenities to optimise energy efficiency. Incorporation of renewable energy systems are also encouraged.

PART 3 Water: Selection of water fittings & strategies towards efficient water usage & management.

PART 4 Project Management: Management practices to facilitate enhanced environmental standards & stakeholder engagement in planning & execution of project.

PART 5 Waste Management & Environmental Protection: Application of sustainable waste management practices, storm water design & selection of materials that would reduce environmental impacts.

PART 6 Innovation: Adoption of green practices & new technology that are innovative & have potential environmental, social & economic benefits.

GREENRE AWARD RATINGS

	RES, NRB, ENRB, HC, IND & EIND	TS	IS, INT
PLATINUM	90 & Above	100 & Above	90 & Above
GOLD	85 to < 90	90 to < 100	80 to < 90
SILVER	75 to < 85	75 to < 90	70 to < 80
BRONZE	50 to < 75	60 to < 75	50 to < 70

CERTIFICATION PROCESS

APPLICATION

Submission of application.

PRE-ASSESSMENT

A pre-assessment audit will be conducted to give the project team a better understanding of the criteria & evaluation of the certification level sought

ACTUAL ASSESSMENT

Actual assessment to be conducted once the design & documentary evidences (e.g. approved BP) are ready. Assessment process includes design & documentary review, inclusive of external assessor review.

EXTERNAL ASSESSOR REVIEW

AWARD OF PROVISIONAL CERTIFICATE

SITE VERIFICATION ASSESSMENT

Site verification to be conducted upon project completion.

AWARD OF FINAL CERTIFICATE

GREEN COST CERTIFICATION

For projects claiming tax incentives
